

 **reFLEX**

**YOUR
BOAT
IS OUR
BUSINESS.**

Between the rigors of the water and ravages of weather, your boat's decking really takes a beating. That's why you want traction decking that's durable yet comfortable, with a non-slip surface and an unmatched look and feel that will leave your boat looking the best on the water!

reFLEX gives your deck all that and more, and it's also ideal for swim platforms, helm stations, floors, steps, railings, coaming bolsters – even the top of your cooler! Made from safe but powerful Polyethylene (PE) foam, reFLEX is how today's captains perfect their deck.

Division of:

reFLEX

Powered by:  **SYNTEC**[®]

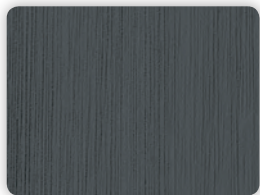

SYNTEC's name has been synonymous in the marine industry for decades as a supply leader and design innovator. reFLEX has long been a part of SYNTEC's portfolio and now has become a new division of SYNTEC. reFLEX is re-inventing itself with a brand new manufacturing and fabrication facility in Northeast Georgia. Inside this facility, reFLEX will be utilizing our decades worth of flooring expertise to create the best marine traction decking possible.

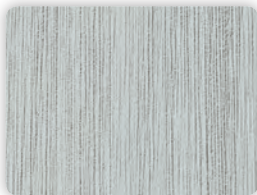

An all-new, exclusive digitizing program that is unmatched in the flooring industry will help reFLEX provide you with the most precise and custom designs possible. Our new manufacturing and design team will allow reFLEX to provide exceptional service to the OEM Markets as well as build a Distribution Network to service all after-market customers.

So if you are an OEM that is looking for a trusted partner with unbeatable products, or you are a boat owner looking to give your boat a new custom look that will not only withstand the rigors of the wind and the waves but grab everyone's attention, **our teams at SYNTEC and reFLEX are looking forward to working with you.**

reFLEX Specifications

Sheet Size:
40" X 80" (nominal)

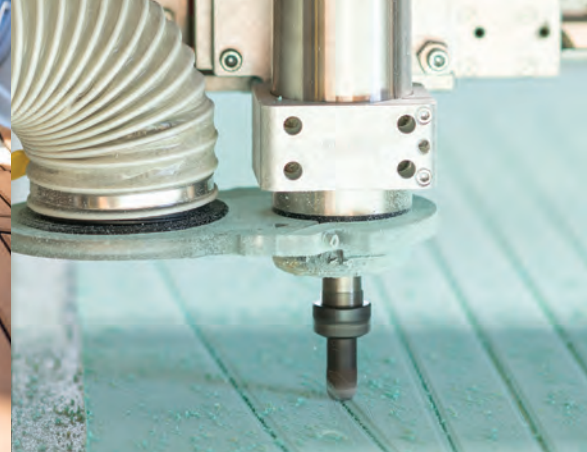

Finish:
Brushed with
reFLEX's exclusive
truGRAIN Finish
or Smooth

Density:
130 - 160 kg/m³

Thickness:
Most colors
are available in a
single color or a
combination of
any two or three
colors laminated
together.

Typical thicknesses
are 3mm, 5mm,
6mm, 9mm. Other
thickness options
are available upon
request.

Dual Density
combinations
are also available
in select color
combinations.

DECKING reINVENTED

reFLEX has reinvented the traction decking market! First, reFLEX is manufactured with a high-density, closed cell polyethylene (PE) foam that has been proven to out-perform the EVA and cross-linked foams out there. Then, reFLEX takes it to another level by creating truGRAIN, an exclusive manufacturing process that adds several proven performance enhancements. It's a difference that you can **SEE and FEEL!** A bold step forward in marine flooring.

INNER STRENGTH

Marine flooring demands better, and with reFLEX, we deliver. reFLEX provides a one-of-a-kind look and feel with unmatched performance characteristics. reFLEX has been third party tested and proven to outperform the competition in UV exposure, dimensional stability, stain resistance, peel strength, and durability. reFLEX with truGRAIN not only looks better on the outside, its built from within to give you the most durable traction flooring available.

PRECISE DIGITIZATION

reFLEX's Design Team has created an unmatched service level for all your design needs. No more clunky machinery, templates, and back and forth to ensure a design fits in your boat.

reFLEX now offers a state-of-the-art digitizing process that takes all the guess work and time, out of the equation. A reFLEX representative can come to you and digitize your boat, insuring accuracy and speed. We measure... we make it. Relax, its reFLEX.

QUALITY CUSTOMIZATION

When it comes to customization, reFLEX places you in the captain's seat! reFLEX is available in a variety of styles and colors, and can be trimmed to your preferred size and thickness. You can also personalize your pads with custom designs, logos and patterns.

Your unique design will be cut into your pads on reFLEX's innovative, in-house computer numeric control (CNC) and laser etching machines to ensure the highest-quality design.

At reFLEX, we don't just talk the talk.

As a division of SYNTEC, we rely on flooring knowledge with decades of experience. Its a legacy of know-how, so we take it seriously. That is why we have put reFLEX through the most grueling of 3rd party performance testing. And then, we compared it to other EVA and cross-linked EVA foam decking. reFLEX out-performed all others.

In over a dozen performance tests, reFLEX with truGRAIN finish blew the competition away, covering everything from peel strength, stain resistance, durability, and UV exposure. The results showed that our exclusive manufacturing process provided the highest level of success, and where others failed, reFLEX remained strong.

We all know that the best product can be ruined if not properly installed. That is why reFLEX has created a Certified Installation Program that features a growing network of Distributors as well as OE Manufacturers to ensure your top-of-the-line reFLEX products keep your boat looking good year in and year out. Just like any masterpiece, attention to detail is key. That is why we remove any guess-work and have created an easy to follow installation certification program.

As an OEM, our SYNTEC and reFLEX teams will work together with you to ensure all materials and installation steps are in place so that every boat is installed with the best possible practices.

For the after-market, reFLEX has you covered. We are building a network of certified Distributors that will be able to quickly digitize, quote and install reFLEX with the highest of standards.
