

# STRONG ROOTS FOR **TOUGHER** MARINE DECKING

reFLEX decking is making waves in the marine industry. That's because, as a division of SYNTEC Industries, reFLEX is no ordinary product. Our roots lie in the flooring industry. Syntec has been a leader in the textile industry for almost 4 decades! So when we say we know how to make a great product, we're not playing games.

## **Confidence the Competition Can't Claim**

Others may try to downplay our expertise; they may say our history is limited to marine carpet. They'd be wrong. SYNTEC and our affiliates have been manufacturing and installing all facets of the textile flooring industry for decades. We source only the best raw materials and use our own equipment and experts to test them for quality and performance. This keeps us confident that you'll keep coming back.

## **A Company You Can Count On**

In a time when companies pop-up only to quickly shut down, reFLEX has proven its staying power. And we don't rest on laurels. We're always looking to create new products to enhance our customers' experience. Today, you'll find reFLEX and SYNTEC on boats, RVs, ATVs, and in homes. But just having a lot of products out there isn't what's important to us. It's knowing that they're being enjoyed, every day, by captains and crews, travelers and adventurers, and families across the globe. That's what drives us.

## BUILT STRONGER

You never know what kind of quality to expect with blended and cross-linked foams. reFLEX uses only PE foam to offer the most dependable foam flooring on the market.

**reFLEX is PROVEN to be BETTER.**

How do we know? An independent lab put reFLEX and its competitors through a series of tests to determine hold, performance, endurance, and resistance. Across four tests, reFLEX's superior PE engineering and truGRAIN finish flexed its muscle, outperforming competitors.

## GRIPS TIGHTER

Some brands may seem up for anything, but they won't stay down for nothing. When the pressure's on, reFLEX doesn't peel, keeping its bond in wet and dry conditions.

**reFLEX flooring is PROVEN to HOLD.**

reFLEX and its competitors were adhered to fiberglass for eight hours. Next, force was applied to each to determine at what point the adhesive bond would break. Wet or dry, reFLEX required more than 30% greater force compared to the closest competitor.

## LASTS LONGER

Mother Nature can be harsh on boats, with her UV rays aging the face of flooring and her heat compromising its stability. reFLEX flooring fights back, showing her who's the real boss.

**reFLEX flooring is PROVEN to ENDURE.**

reFLEX and its competitors were subjected to 1,000 hours of accelerated UV, mimicking one year of exposure, and then put into a 140° oven to test stability. reFLEX showed little color distortion and maintained its structure 50% better than the closest competitor.

## WEARS BETTER

Whether it's a fishing expedition or an afternoon excursion, heavy crew traffic can be punishing on marine flooring. reFLEX withstands this damage, effortlessly maintaining it's good looks and its weight class.

**reFLEX flooring is PROVEN to PERFORM.**

reFLEX and its competitors were placed against rotational resistance devices mimicking the damage of foot traffic over time. reFLEX received an ideal wear performance rating and kept it's weight, while others performed poorly and lost some mass.

## STAYS CLEANER

A harmless glass of wine or a pit-stop at the pump can quickly turn into a big mess. Good thing there's no stain in our game! reFLEX flooring actually resists most stains, allowing you to wipe them away with ease.

**reFLEX flooring is PROVEN to RESIST.**

reFLEX and its competitors were coated in mustard, ketchup, wine, gasoline, lotion, and other stain-makers for 24 hours to test stain resistance. reFLEX averaged nearly 4.5 out of 5 while the closest competitor couldn't even break free from the 3's.
