GUSSI ITALIA

- NEW PRODUCTS -

The ***Murano Multifunction Display*** by Gussi Italia is a touchscreen display that can be installed conveniently on the center cap on select wheels. In with our Power Wings Sport, you can effortlessly take control; your hands never have to leave the wheel.

The ***Murano Multifunction Display*** seamlessly connects with most eletronic features on your boat. Control operations like speed, cruise control, ballast control, audio, volume and more.

MURANO APP *available on:*

App Store

Google Play

CUSTOMIZATION

Company Logo: This will be set as the "home" page of the display

Choose up to three colors, only one at a time can be displayed

Swipe display page options: Example - RPM, Speed, Direction. Each page can display 2-3 functions. Ideal to limit to 3 pages, not including the home page.

CANBUS protocols: The Murano system must be programmed using NMEA2000 protocols of the CANBUS system manufacturer. To program the Murano system, it is necessary to know the protocols for each qualified function that OEM wants to end user to access.

- Back lighted grab handles
- Premium machined aluminum
- Backlit controlled via Bluetooth connection to the Murano app or Murano steering wheel

POWER HUB 2.0

- Magnetic induction PowerHub
- Power Transmission
- Unlimited wheel rotation
- Up to 5 AMPS

SYNTEC and Gussi Italia introduced their original magnetic induction PowerHub, which powered some of the first marine smart wheels and the groundbreaking PowerWings. Building on this success, we are proud to unveil the PowerHub 2.0, an advancement that takes magnetic induction to new heights.

The PowerHub 2.0 utilizes cutting-edge electromagnetic technology to wirelessly transfer power to steering wheels. This advancement not only supports our innovative PowerWings and patented Murano System but also introduces the industry's first wireless heated steering wheel.

Traditionally, powering features like heating elements and complex electronics on a steering wheel required a hard-wired clockspring. However, in the marine environment, a clockspring cannot accommodate the high rotation demands of a marine wheel. With the new PowerHub 2.0 from Gussi Italia, wires are obsolete. The PowerHub 2.0 ensures unlimited wheel rotation and delivers all the power needed for complete helm control, free from the constraints of traditional wiring systems.

ALUMINUM PRO

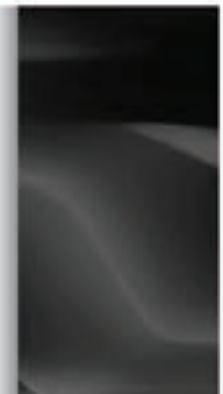

- Aluminum machined spokes and grip
- Aluminum machined hub
